Zsolt Horváth

Software Developer with Backend focus

About

I have been interested in coding since my young age and began learning web development later on.
I have since transitioned into a professional career in backend development, starting as a junior full-stack developer and gaining experience with a range of technologies and
programming languages. I am currently a backend developer with a focus on building robust and scalable applications.
I am constantly seeking to learn and improve my skills, and I am drawn to work environments where I can collaborate
and learn from others. I am motivated by the opportunity to work towards well-defined goals and make meaningful
contributions to the team.

Career

- 2023 – Present – **Software Developer** at **Billingo**
  - Adding new features to the company's main product with **PHP, Laravel, MySql, Redis, Elasticsearch** as main technologies.
  - Integrating data synchronization to external CRM system while not blocking user interaction.
  - As a high impact change, which affected code base and deployment as well, I upgraded multiple framework versions and mitigated performance hits.
- 2021 – 2023 – **Software Developer** at **Webshippy**

- Developing and maintaining new features of the company's main product and onsite software with a stack containing
the following technologies: **PHP, MySql, Redis, Memcached**
- Developing new features in microservices architecture with the help of **Laravel, Kafka, Docker**

- 2020 – 2021 — **Software Developer** at [Mindtech Apps](#)
  - Developing backend Rest API with **PHP** and **Laravel**
  - Developing backend API with **GraphQL** with **Javascript/TypeScript** and **NestJs**
  - Assisting frontend team with API integrations

- 2013 – 2020 — **Software Developer at SR Limnatis Holdings Ltd**
  - Developing tube sites, administration site, cms and webmaster site and supporting services in **PHP**
  and **Javascript**
  - Refactor and rebuild legacy project from plain PHP to **Codeigniter** and years later to **Laravel**, support new
  version updates
  - Scale sites for high traffic (40M+ views per day) with the help of databases such as **MySql**
  and **MongoDb** and with **Redis** as a cache layer
  - Implementing **Elasticsearch** for searching and filtering on our tube sites

- 2013 February - September — **Mobile Application Developer and Manual Tester** at [Appsters](#)
  - Compose mobile applications with a set code base for multiple platforms (iOS, Android, Windows Phone)
  - Manual testing for said mobile application by a predefined report

Education

- 2010 – 2012 — **Szent György Média és Informatikai Szakgimnázium**
Web Development Qualification by National Qualification Register
