

Zsolt Horváth

Backend Software Developer | Budapest | [GitHub](#) | [LinkedIn](#) | hrvth.7slt@gmail.com

My childhood passion for computers turned into a career in backend development. I've worked on a wide range of projects, from legacy monoliths to new services, in high-traffic environments where reliability and availability matter. I enjoy working in teams, sharing knowledge, and making a positive impact whenever I can.

Career

- 2026 – Present – **Senior Software Engineer** at [Recart](#)
 - Expanding the integration feature set of the company's SMS marketing and list growth platform.
 - Maintaining and monitoring the associated microservices using **TypeScript, Node.js, MongoDB, Redis, DynamoDB**, and **Datadog**.
 - Ensuring fault tolerance and high availability with the help of **SQS** and **SNS**.
 - Contributing to a rapidly evolving **MCP server** to support merchants' agentic workflows.
- 2024 – 2026 – **Staff Software Engineer** at [Byborg Enterprises](#)
 - Planning and developing new features for a legacy streaming site and its services under heavy load with a focus on performance, using **Python, Flask, MySQL, Redis, Elasticsearch, Kafka**, and **Docker**.
 - Integrating a third-party recommendation engine while ensuring high availability.
 - Contributing to the introduction of new technologies, setting up local environments for legacy projects with **Docker**.
- 2023 – 2024 – **Senior Software Developer** at [Bilingo](#)
 - Adding new features to the company's main product using **PHP, Laravel, MySQL, Redis, Elasticsearch**, and **Docker** as the main technologies.
 - Integrating data synchronization with an external CRM system without blocking user interaction.
 - As part of a high-impact change affecting both the codebase and deployment, upgrading multiple framework versions and mitigating performance hits.
 - Monitoring with **Grafana**, tracking errors with **Sentry**, automating deployment with **GitHub Actions**, and automating infrastructure with **Ansible**.
- 2021 – 2023 – **Senior Software Developer** at [Webshippy](#)
 - Developing and maintaining new features of the company's main product and onsite

software using a stack that included **PHP, MySQL, Redis, and Memcached**.

- Developing new features in microservices architecture with the help of **Laravel, Kafka, Docker**
- 2020 – 2021 – **Senior Software Developer** at **Mindtech Apps**
 - Developing backend REST APIs with **PHP** and **Laravel**.
 - Developing backend APIs with **GraphQL** using **JavaScript/TypeScript** and **NestJS**.
 - Assisting frontend team with API integrations
- 2013 – 2020 – **Software Developer** at **SR Limnatis Holdings Ltd**
 - Developing tube sites, administration, CMS, and webmaster sites, as well as supporting services, in **PHP** and **JavaScript**.
 - Refactoring and rebuilding a legacy project from plain PHP to **CodeIgniter** and, years later, to **Laravel**, while supporting new version updates.
 - Scaling sites for high traffic (40M+ views per day) with the help of databases such as **MySQL** and **MongoDB**, with **Redis** as a cache layer.
 - Implementing **Elasticsearch** for searching and filtering on our tube sites.
- 2013 February – September – **Mobile Application Developer and Manual Tester** at **Appsters**
 - Developing mobile applications from a shared codebase for multiple platforms (iOS, Android, Windows Phone).
 - Manually testing the mobile applications using predefined test cases.

Education

- 2010 – 2012 – **Szent György Média és Informatikai Szakgimnázium** – Web Developer Qualification by National Qualification Register
